

Web View -
current web elements

1. Iterate all
elements

Scripts -
static rules for URL
stored as JSON files

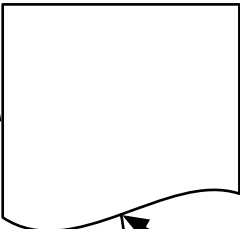

2. use rule
to evaluate
result for current
element

Results -
evaluated rules for URL
stored in local storage

3. Compare stored
results with currently
evaluated results

Matching Algorithm -
uses all inputs to match
annotated elements.

4. match is positive
if comparison in 3.
is equal
